

**Publishing Output Analysis Report** 

# Journal of Innovative Analytics

ISSN 1234-567X eISSN 4321-7654

These analyses link journal editorial and publication data to reveal the effect of decisions and selections on the citation impact of the journal.

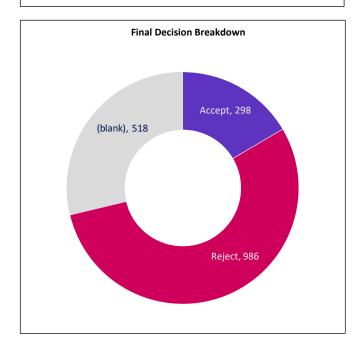

The report gives a full breakdown of Editor-in-Chief and (Associate) Editor decisions, the proportions and numbers of papers accepted and rejected and the impact of those papers accepted for publication. The report also explores the relative impact of different manuscript types and content sections. The report is accompanied by a full analysis of accepted paper bibliometrics to identify which were the most and least influential.

The report also explores the fate of rejected papers: are these being published elsewhere and, if so, what is their impact? Uncover whether a journal is making optimal decisions and spot opportunities to retain good content or expand existing coverage. A full analysis of rejected paper bibliometrics is provided.

# **Journal of Innovative Analytics**

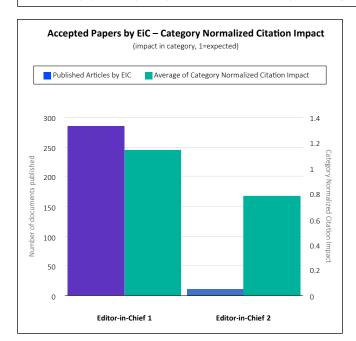

Publishing Output Analysis Report (2016–2018)

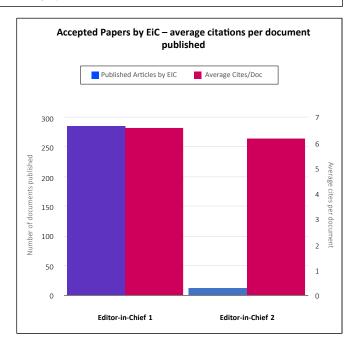

#### **Decision Breakdown**

#### **Accepted Papers by EiC**

numbers of papers accepted by EiCs and their citation impact in the journal and category

#### **Decision Breakdown**

A breakdown of final decisions: accept, reject or those pending based on the source data (ScholarOne Manuscripts or journal-supplied data - this can include revisions that have not been returned. This shows the overall final disposition of papers for the reporting period.

#### **Accepted Papers by EiC**

The number of papers accepted by EiC(s) and their normalized citation impact in the journal's subject category and their overall citation impact (average number of citations per accepted paper). This shows the overall impact of papers accepted by each Editor-in-Chief and whether or not they receive, on average, more or fewer citations than would be expected.

#### **Using Normalized Citation Impact**

Citation patterns vary – citations accumulate over time, some document types (e.g. reviews) are more likely to be cited, and citation rates depend on the subject/journal. Normalization ensures that papers are compared with similar papers: the same document type, publication year and journal or category/categories. Journal Normalized Citation Impact (JNCI) and Category Normalized Citation Impact (CNCI) will generally correlate, JNCIs are proportionally lower for high impact journals as the number of expected citations will be higher.

An NCI is a ratio of actual to expected citations: an NCI of 1 indicates that a document or group of documents is receiving the expected number of citations, an NCI of 2 that it is receiving twice the expected, and 0.5, half that expected.

As NCIs are averages, a single or small number of highly cited papers can significantly influence the value.

#### Accepted Papers by Editor

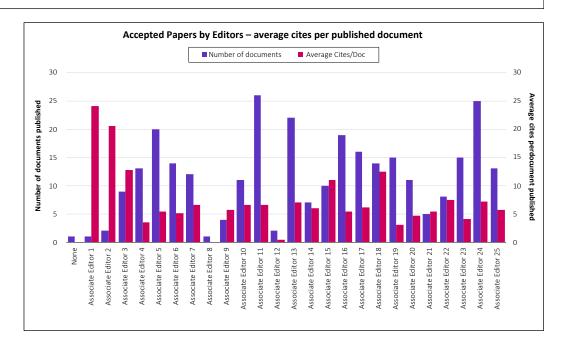

impact of accepted papers in the journal and its subject categories or categories

The number of papers accepted by each (Associate) Editor and their normalized citation impact in the journal's subject category along with their overall citation impact (average number of citations per accepted paper). This shows the overall impact of papers accepted by each (Associate) Editor and whether or not they receive, on average, more or fewer citations than would be expected.

#### **Accepted Papers by Manuscript Type**

impact of manuscripts in the journal and its subject category or categories

#### **Accepted Papers by Manuscript Type**

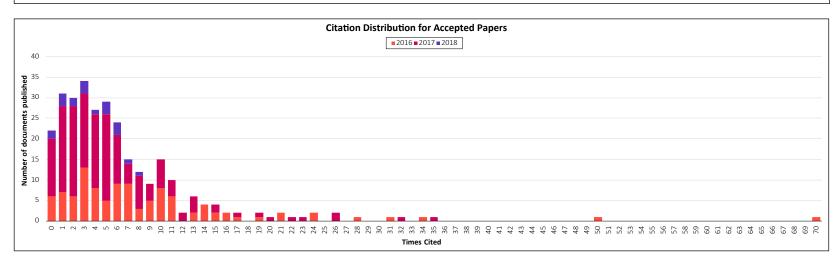

Accepted papers by manuscript type and their normalized category impact and average citations per accepted paper. This shows the citation performance of each of the journal's manuscript types and whether or not a given manuscript type/content section is receiving more or fewer citations than would be expected.

#### **Rejected Paper Matching**

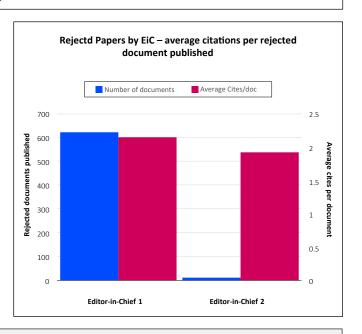

proportion of documents matched to WoS records

#### **Rejected Paper by EiCs**

rejected papers published elsewhere and their citation impact in those titles

#### **Rejected Paper Matching**

The number of papers from the decision dataset matched to records in the Web of Science. This shows the proportion of decided papers found in the Web of Science Core Collection.

#### **Rejected Papers by Editor-in-Chief**

The number of papers rejected by EiC(s) and their normalized citation impact in the journal's subject category and their overall citation impact (average number of citations). This shows the eventual impact of papers rejected by each Editor-in-Chief that were subsequently published elsewhere.

#### **Record Matching**

The Publishing Output Analysis matches records from a journal editorial system (such as ScholarOne Manuscripts) with published records in the Web of Science. A small proportion of accepted manuscripts with significant changes to the title, authorship, or the abstract may fail to be matched. This is also the case for rejected papers. False matches may also be returned for papers with very similar titles and authorship. A full match dataset is provided.

#### **Rejected Papers by Manuscript Type**

rejected papers published elsewhere and their impact in those titles

#### **Rejected Papers by Manuscript Type**

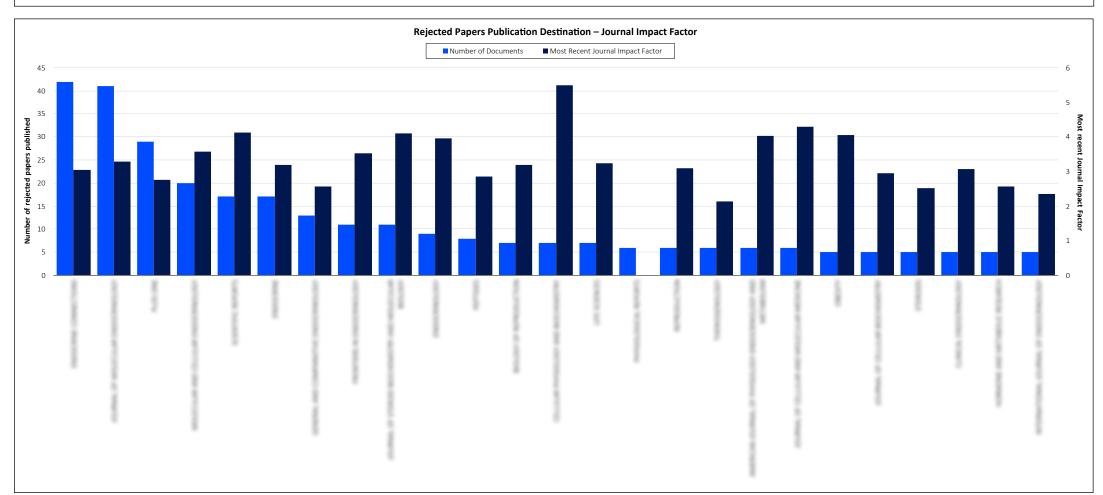

The number of rejected papers for each manuscript type and their normalized citation impact in the journal's subject category and their overall citation impact (average number of citations). This shows the eventual impact of papers rejected, for each manuscript type, that were subsequently published elsewhere.

ISSN 1234-567X Web of Science Group London, UK

#### **Publishing Destination for Papers Rejected by the Journal**

where rejected papers are being cited and their impact

#### Publishing Destination for Papers Rejected by the Journal

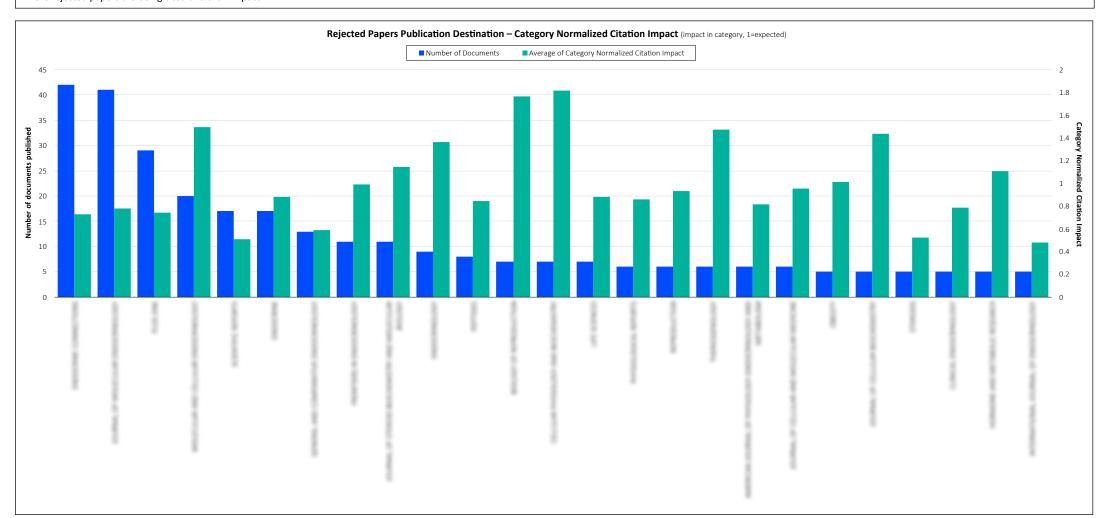

The journals in which rejected papers are subsequently being published, the number of matched papers found and the most recent Journal Impact Factor (JIF) for the recipient journal. This shows how many rejected papers are going on to be published in high impact titles – note that JIFs should only be compared with other journals in the same category.

ISSN 1234-567X Web of Science Group London, UK

**Publishing Destination for Papers Rejected by the Journal** 

where rejected papers are being cited and their impact

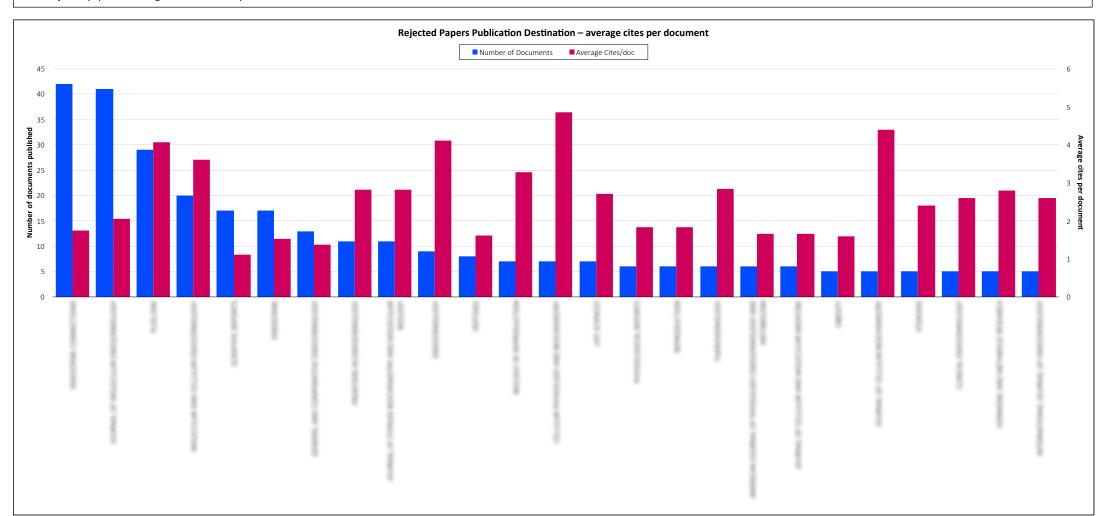

#### **Publishing Destination for Papers Rejected by the Journal**

The average CNCI of those rejected papers subsequently published elsewhere. This shows the category impact of those papers.
